Hardy Climbers, Ramblers and Pillar Roses

A Climbing Rose is a plant that, if given support, grows higher and higher, starting each year from or near the top of the previous year's growth.

A Rambler, properly speaking, has long, thin, pliable branches which if not supported, take root where they touch the ground and thus "ramble."

A Pillar Rose does not climb or "ramble," for its canes are too stiff. Some are strong and self-supporting; others require a stake or some support.

Price, except as noted, best-grade, 2-yr. plants, \$1.25 each; 3 for \$3.15

American Pillar. Rosy pink or carmine, with white center and yellow stamens. Usually classed as a rambler but is actually a vigorous climber.

Excelsa (Red Dorothy Perkins). Profuse, double bloom in clusters; Tyrian rose to bright light crimson. Exceedingly vigorous growth—12 to 18 feet.

Gardenia. Creamy white, yellow-centered blooms in small sprays. Extremely vigorous.

Mme. Gregoire Staechelin (Spanish Beauty). Bud long pointed; flower very large, of distinct form, fragrant. Delicate pink, stained crimson outside, followed by pear-shaped fruit. Long stems. Abundant-blooming climber.

Paul's Scarlet Climber. Semi-double flowers in large clusters; flaming scarlet with a crimson shade. None better. This is an excellent pillar Rose. \$1.10 each; 3 for \$2.85.

Silver Moon. Large, clear silvery white, semi-double flowers; yellow stamens. Excellent climber.

MARECHAL NIEL. \$2.00 each; 3 for \$5.00

Floribunda or Hybrid Polyantha Roses

This is not any particular strain of Roses, but rather a new group derived from various sources. They are strong growers, more cold-resistant than Hybrid Teas; the flowers are single to very double, borne in huge clusters throughout the season. They are most effective planted all one color in mass plantings or as informal borders and hedges.

Price, except as noted, best-grade, 2-yr. plants, \$1.10 each; 3 for \$2.85; \$11.50 per doz.

Baby Chateau. Bud ovoid, crimson; flower double, red shaded garnet. Blooms are carried in clusters. Very vigorous.

D. T. Poulsen. Semi-double, bright blood-red. Fragrant.

Simple Hints for Growing Prize-Winning Roses

We advise fall planting when and where possible. You should be guided by climatic conditions in your section and the experience of successful local gardeners. We usually begin shipping about October 1 and continue until April 1, but find late spring plantings do not survive the first summer as well as earlier plantings.

Any good soil in a sunny location, and away from trees and shrubbery, is right for Roses. The soil should be spaded deep—about 18 inches. Any manure used should be mixed with soil and placed within the first 9 inches at the bottom of the bed. Don't let the roots touch the manure. Fill top of bed with top soil.

Make the holes deep and large enough to receive the roots without bending. Place the plant with roots spread out, and slightly deeper than the plant grew in the nursery. Work soil in around the roots until hole is three-fourths full. Pack well and water thoroughly. When water settles, finish filling hole with loose top soil; this acts as a mulch. If fertilizer is required on the surface, spread it carefully and work into the top soil.

Should watering be required in dry weather, be sure to soak the soil thoroughly. A light sprinkling is almost useless. Good cul-

tivation and loose top soil or a mulch of peat moss are surely as important as watering.

Foliage diseases may be controlled with Tri-ogen or its equivalent. Good sprays may be bought from your local merchant with directions on the containers.

Pruning: Prune Hybrid Tea and Hybrid Perpetual bush Roses by removing misplaced canes and old and diseased wood at the base; shorten remaining canes to desired height. To keep Tea and Polyantha bush Roses in shape, remove dead wood. Prune Hybrid Tea Climbers and Tea Climbers to remove old or diseased wood, and to keep in bounds. Prune Shrub Roses and Climbers which bloom only in the spring by removing old, weakened canes at the base, leaving the new thrifty canes for next year's bloom. (Example, Excelsa and Banksia.) All Rose pruning should be done in the spring when buds begin to swell (about February 15 here) except Climbers and Shrub Roses that bloom only in the spring; these should be pruned in early summer, soon after they have finished blooming.
